

At his own published settings, three lines beat the method

k=16, consolidation_epochs=3 [256,256]/[64,64] — the PT-B row of PT_full.md, verbatim

shrink-only vs pt_full: +761 (p = 0.041). His config gives pt_full 153,684 parameters against vanilla's 11,085 — the three-line version wins with 1/14 the capacity.
